21. (Currently Amended) A method for recording changes in visual stimuli as a user interacts with the visual stimuli, comprising:
 - creating a browser object by a control application;
 - establishing a conduit between the browser object and a browser interface;
 - receiving visual stimuli; and
 - creating page objects based on the received visual stimuli by the browser object and the control application without requiring input from the user.
22. (Previously Submitted) The method of claim 21 comprising mirroring events occurring within the browser interface by the browser object.
23. (Previously Submitted) The method of claim 22, wherein the mirroring occurs via the conduit.
24. (Previously Submitted) The method of claim 22, wherein the events cause changes in the visual stimuli.
25. (Previously Submitted) The method of claim 24 comprising reporting the events to a receiving module.

26. (Previously Submitted) The method of claim 24 comprising reporting the changes in the visual stimuli to a receiving module.

27. (Previously Submitted) The method of claim 24 comprising displaying the changes in the visual stimuli to the user.

28. (Previously Submitted) A method for recording changes in visual stimuli, comprising:

creating a plurality of page objects based on received visual stimuli; and

monitoring the visual stimuli by each of the plurality of page objects, wherein each of the page objects is related to a portion of a web page.

29. (Previously Submitted) The method of claim 28 comprising recording a change in the monitored visual stimuli.

30. (Currently Amended) A method for recording changes in viewable content, comprising:

receiving a plurality of viewable content by a browser interface;

appending an applet to each of the viewable content, wherein the appending creates a modified version of each of the viewable content;

instantiating the modified version of each of the viewable content in a plurality of web pages; and

monitoring events not requiring user input that may cause changes in each of the viewable content.

31. (Previously Submitted) The method of claim 30 comprising initiating a process block by a control program.

32. (Previously Submitted) The method of claim 31, wherein the appending of the applet is performed by the control program.

33. (Previously Submitted) The method of claim 31, wherein the monitoring is performed by the applet.

34. (Previously Submitted) The method of claim 33 comprising communicating related data to the monitoring of the events and the changes in the viewable content.

35. (Previously Submitted) The method of claim 33 comprising reporting the changes by the applet in each of the applets' corresponding web pages.

36. (Previously Submitted) The method of claim 35 comprising reporting the changes by the applet to a receiving aspect of the control program.

37. (Previously Submitted) The method of claim 36, wherein the reporting occurs once the browser interface performs the instantiating.

38. (Previously Submitted) The method of claim 30, wherein the viewable content is displayed.

39. (Previously Submitted) The method of claim 38 wherein the changes to the displayed viewable content occur while a user is interacting with each of the plurality of content in the plurality of web pages.

40. (Previously Submitted) The method of claim 30, wherein the plurality of web pages constitute a complete web page.
